

Exemple d'exécution du programme

On recherche par exemple tous les usernames , les noms, les adresses email et les groupes qui contiennent le string « jira » .

Le résultat donne 0 users et 2 groupes qui contiennent ce string

Le résultat est présenté à l'écran

Le résultat est sauvegardé/ dans 2 fichiers intitulés : List-items.json et List-items.txt

```
C:\C#Rest-API\Get Jira Users and Groups\bin\Debug\netcoreapp3.1\Get Jira Users and Groups.exe

Execute (Jira Server platform) REST API
-----
Ref : https://docs.atlassian.com/software/jira/docs/api/REST/8.13.2/
-----
pathname complet du serveur Jira (URL) with port number ?
as : http://localhost:8080
-----
http://localhost:8080
extract a list of all users, groups,Name, emailaddress, containing this string
string used to search username, Name or e-mail address, groups that will be returned ?
jira
URIs for Jira's REST API choosed to pick all matching items http://localhost:8080/rest/api/2/groupuserpicker?query=jira
-----
user account in Jira for authentication
-----
Jira username ?
guihen01
Jira password ?
admin
-----

-----
Microsoft Visual Studio Debug Console
